Custom order maid 3d 2 how to install mods. Custom maid 3d 2 guide. Custom order maid 3d 2 install guide.

The EE20 engine had double overhead camshafts (DOHC) per cylinder bank that were driven by a chain and gear with a speed-reducing gear. Euro 6 changes The Euro 6 emissions compliant EE20 diesel engine was introduced in the Subaru BS Outback in 2014 and the Subaru SJ II Forester in 2015. Furthermore, the crankshaft journals were made from aluminium and cast iron due to the high pressure applied on both side of the cylinder block. The forged connecting rods had fracture split bearings for the crank end and an asymmetrical profile which increased precision during assembly. Initially, the turbocharger was positioned under the engine. Relative to the Euro 5 version, changes for the Euro 6 EE20 engine included: An open deck cylinder block; An increase in piston crown capacity; A new piston skirt coating was introduced to reduce friction; A reduction in the compression ratio to 15.2:1 to lower combustion temperature and reduce NOx emissions; A fourth generation common rail injection system was introduced for higher injection pressure (200 MPa, previously 180 MPa) and a finer fuel spray; Each diesel injector had an integrated driver unit to reduce fuel leak volume, fuel pump load and improve fuel economy; A low-friction timing chain was introduced to drive the fuel pump (previously gear-driven) for quieter operation; The glow plugs were revised to improve pre-heating temperature at start-up and increase after-glow time; Oil jets were added to the timing chain drive; A low-pressure EGR circuit was introduced to increase the EGR rate, while the high-pressure EGR circuit was 'optimised'; The turbocharger repositioned at the bottom right of the engine (previously under the engine) and improved vane control was achieved; The diesel particulate filter (DPF) substrate specifications were revised and regeneration performance enhanced. You can download the paper by clicking the button above. You're Reading a Free Preview Pages 115 to 146 are not shown in this preview. EGR and DPF The EE20 diesel engine had a water-cooled exhaust gas recirculation (EGR) system which recirculated exhaust gases to the intake to lower combustion temperatures and reduce NOx emissions. The Euro 5 and Euro 6 EE20 engines had a closed-loop diesel particulate filter (DPF); both the oxidation catalyst and DPF were positioned next to the turbocharger to utilise the heat of the exhaust air. Alternator The alternator for the EE20 diesel engine had a voltage charging control system which, to reduce the alternator's load on the engine, reduced the charging voltage when the vehicle was idling or being driven at a constant speed and increased voltage at low speeds. Injection and combustion The Euro 4 and Euro 5 EE20 diesel engines had a Densi common-rail injection system with eight-hole solenoid-type injectors that achieved an injection pressure of 180 MPa. For the Euro 6 EE20 engine, however, injection pressure was increased to 200 MPa. For the EE20 engine, the injectors were positioned at an almost 90 degree angle to the cylinder and were 40-50 mm shorter than those used in inline four-cylinder diesel engines. The Euro 5 and Euro 6 EE20 engines are understood to have ceramic-type glow plugs. You're Reading a Free Preview Pages 609 to 614 are not shown in this preview. The first step towards benefiting from the Netstrata difference is to make an enquiry for an obligation free quote. For all general enquiries, you can send us a message by using the form below. You're Reading a Free Preview Pages 824 to 861 are not shown in this preview. At higher engine speeds, however, the vanes would open to reduce airflow resistance and improve fuel consumption. Generally, VNTs use movable vanes in the turbine housing to adjust the air-flow to the turbine to realise comparable exhaust gas velocity and back pressure throughout the engine's rev range. You're Reading a Free Preview Pages 525 to 600 are not shown in this preview. Loading PreviewSorry, preview is currently unavailable. Crankshaft, connecting rods and pistons To withstand the high combustion pressures of a diesel engine, the crankshaft for the EE20 engine was subjected to a surface treatment for increased strength. You're Reading a Free Preview Pages 457 to 486 are not shown in this preview. You're Reading a Free Preview Pages 383 to 393 are not shown in this preview. Cylinder head The EE20 engine had an aluminium alloy cylinder head that was 17 mm thinner than the EJ20 engine. The four valves per cylinder (two intake and two exhaust) were actuated by pivot-type roller rocker arms. You're Reading a Free Preview Pages 227 to 267 are not shown in this preview. You're Reading a Free Preview Pages 65 to 90 are not shown in this preview. The pistons had internal cooling channels, while oil jets in the crankcase sprayed the underside of the pistons. You're Reading a Free Preview Pages 65 to 90 are not shown in this preview. The number of idlers used in the auxiliary belt system was reduced; A more precise sensor measured battery current, voltage and temperature; and, The rear flange and bracket material, exhaust pipe and end plate material were changed for rust prevention. You're Reading a Free Preview Pages 683 to 687 are not shown in this preview. You're Reading a Free Preview Pages 701 to 755 are not shown in this preview. It is understood that the maximum turbine speed for the IHI turbochargers used in the EE20 engine is 190,000 rpm. Furthermore, the intake ports and the diameter of the intake valves were designed to create a swirling effect for the air as it entered the combustion chamber. You're Reading a Free Preview Pages 769 to 810 are not shown in this preview. IHI turbocharger The EE20 engines have IHI turbochargers with variable nozzle turbines (VNTs).
